MOUNTAIN HORSE SOLUTIONS
A GLOBAL ORDNANCE COMPANY

Modular Proximity Fuse System

Dual-Safe, Modular Solution for UAS Munitions

Argus Industrial delivers advanced technology and government services worldwide, backed by expertise in special operations, engineering, and defense. From secure communications to innovative solutions like the Modular Proximity Fuse, we support critical operations and global opportunities with reliable, user-focused products.

+ Dual-Safe Fusing

Two physical safeties—switch and pin—with a final electronic arming delay, ensures operational safety in all environments.

+ Programmable Precision

The 950nm IR LED & photoreceptor enables customizable proximity detonation and electronic arming delays, enhancing flexibility and safety.

+ All-ordnance Versatility

The modular nose cap enables quick conversion of field-expedient or surplus munitions for unmanned use in both “drop” and “one-way” modes.

Features

The modular proximity fuse offers a dual-safe arming solution for UAS-deployed munitions, using a custom PCB and compact 3D-printed nose cap. Configurable for both ordinance drop missions and kinetic one-way ordinance deployment. Mass-producible through scalable 3D printing and PCB-A manufacturing, one fuse for all UAS missions.

- The dual-safe measures include a safety pin, arming switch, and electronic delay for superior handling and operational security.
- An IR LED and photoreceptor allow drone operators to set precise detonation distances, with a standard trigger range of 1.8 meters.
- The modular 3D-printed nose cap fits a wide range of munitions and supports both drop and one-way mission profiles (**TRL-9 in Ukraine**).
- Self-contained battery and operation, requires just one servo link to the drone, and weighs under 0.3 lbs (0.15 kg) for seamless integration.
