

ENSCO C-UAS National Training and Test Center (C-NTTC)

Mission: The premier center for Counter-Unmanned Aerial System (C-UAS) research, testing, training, and technology integration supporting homeland security, critical infrastructure, and defense operations through multi-domain experimentation.

ENSCO

KEY FEATURES

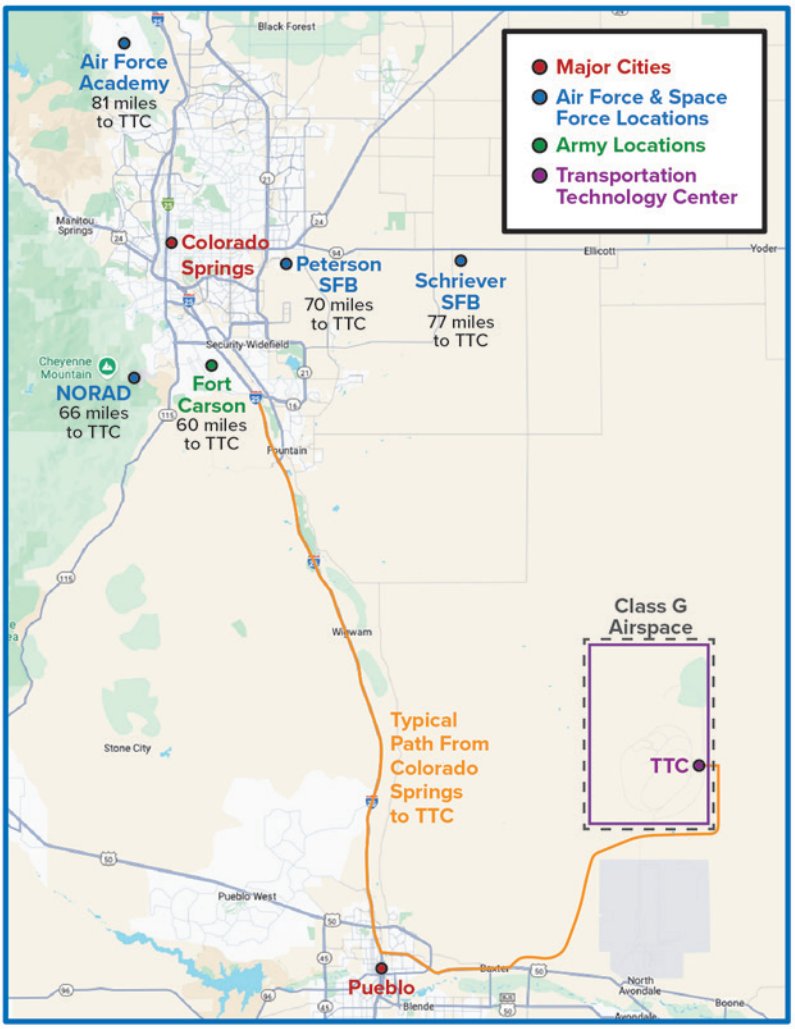

- Secure, Federally-Leased Test Facility for answering the Nation's most critical safety and security questions
- Federal Experimentation Station license for expanded Radio Frequency (RF) testing
- Full-Spectrum Detection-to-Defeat Support capable of hosting Group 1-3 UAS
- Mission-Tailored Engineering Support and expertise to provide end-to-end test design, instrumentation, data analysis, and regulatory coordination

STRATEGIC IMPORTANCE:

- Detection to Defeat: Full-spectrum evaluation of detection, identification, and mitigation technologies
- Train-as-You-Fight: Realistic full-spectrum, joint-force C-UAS operations
- Accelerates Fielding: Transitions tech from prototype to operational use
- Enables Interagency & Allied Ops: Supports joint, coalition, and cross-domain integration
- Protect Critical Infrastructure: Test responses to drone threats on key assets
- Compliant Testing: Operates within FAA, FCC, and DOJ-approved frameworks

WHO BENEFITS?

- **Homeland Security Partners:** Border security, infrastructure defense, and event protection
- **Department of Defense:** Operational testing, system validation, and mission training
- **Federal Law Enforcement:** Tactics training for counter-drone engagements
- **Academia & Industry:** Testbed access, standards development, and sensor validation
- **U.S. Allies and Partners:** Interoperability training and multinational swarm defense exercises
